chinese

ABOUT ME

I am Syed Mutahir, a dedicated Full-Stack Developer with expertise in the MERN stack (MongoDB, Express.js, React.js, Node.js) and Next.js, particularly excelling in backend development. With a year of hands-on experience and a background in data science, I build responsive and engaging web applications that seamlessly integrate dynamic backend processes with user-friendly front-end interfaces. My proficiency in JavaScript ensures that I deliver clean, maintainable, and scalable code tailored to meet project needs. In addition to coding, I enjoy exploring new languages, writing poetry, and playing the piano. Together, let's create innovative solutions that make a difference.

WORK ON PROJECTS

Twitter Backend Clone

Backend for a Twitter clone built with Node.js, featuring API routes for user, tweet, and comment management. Implements JWT for secure authentication, role-based access control, and real-time chat with Socket.io. Includes schemas for users, tweets, and comments. Nodemailer handles email verification and OTP-based password resets. Designed for scalability, security, and real-time user interaction.

CodeCache

An open-source project built with React, Tailwind CSS, and Firebase. Developed a web application that allows users to securely store and access their code from anywhere. Implemented a responsive and intuitive UI, enabling seamless code management and retrieval.

MessageNow

This is a modern, real-time chat application built with React, Firebase, and Tailwind CSS. The app allows users to follow and unfollow other users and send direct messages instantly. It features a sleek, responsive design, ensuring a seamless experience across devices. Powered by Firebase, it delivers fast and reliable real-time communication.
